ORIGINAL ARTICLE

Cefepime–Taniborbactam in Complicated Urinary Tract Infection

Florian M. Wagenlehner, M.D., Leanne B. Gasink, M.D., Paul C. McGovern, M.D., Greg Moeck, Ph.D., Patrick McLeroth, M.D., MaryBeth Dorr, Ph.D., Aaron Dane, M.Sc., and Tim Henkel, M.D., Ph.D., for the CERTAIN-1 Study Team*

INTRODUCCIÓN

✓ Infecciones urinarias complicadas y pielonefritis agudas.

- Causa de **600.000 ingresos USA** y **elevado coste sanitario**.

MATERIAL Y MÉTODOS

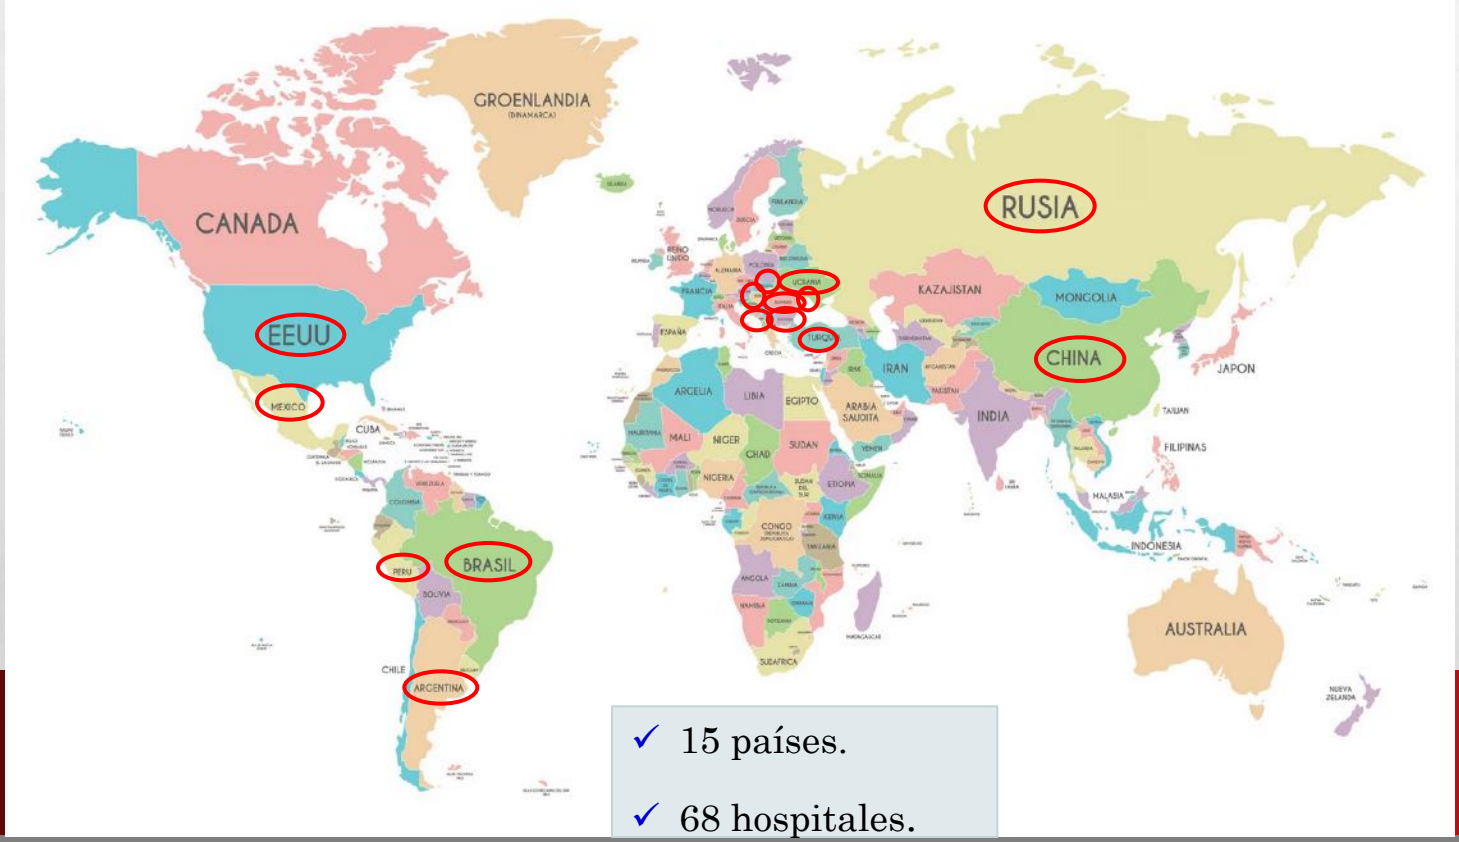
DISEÑO DEL ENSAYO

✓ CERTAIN-1

- Ensayo fase 3 para evaluar seguridad y eficacia de **CEFEPIME-TANIBORBACTAM** vs MEROPENEM en pacientes hospitalizados con **ITUs complicadas**.

✓ Ensayo clínico, aleatorizado, doble ciego, doble simulación controlado con tratamiento activo.

✓ Agosto 2019 a Diciembre 2021.



✓ 15 países.

✓ 68 hospitales.

Venatorx PHARMACEUTICALS

Junta de Castilla y León Consejería de Sanidad · Sacyl · Complejo Asistencial Universitario de León

MATERIAL Y MÉTODOS

CRITERIOS DE SELECCIÓN

CRITERIOS DE INCLUSIÓN	CRITERIOS DE EXCLUSIÓN
Adultos mayores de 18 años con dco:	❑ Antibioterapia > 24 horas previas a la aleatorización.
1. ITU complicada: - Piuria. - >/ 1 signo sistémico (naúseas/vómitos, escalofríos/tiritona/fiebre). - >/ 1 signo/síntoma local (disuria, polaquiuria, tenesmo, dolor suprapúbico). - >/ 1 factor de complicación (anomalía anatómica o funcional del tracto urinario).	❑ Antecedente ITU con patógeno R a meropenem. ❑ Tratamiento AB previo sin indicación filiada. ❑ FG < 30 ml/1.73 m2. ❑ Prostatitis. ❑ Absceso renal o peri-renal. ❑ Insuficiencia hepática grave. ❑ Hipersensibilidad a cualquier β-lactámico.
2. **Pielonefritis aguda:** - Piuria. - >/ 1 síntoma sistémico (náuseas/vómitos, escalofríos/tiritona/fiebre). -Dolor en flanco o hipersensibilidad en ángulo costovertebral.	❑ Transplante renal.

MATERIAL Y MÉTODOS

ALEATORIZACIÓN Y TRATAMIENTO

Aleatorización

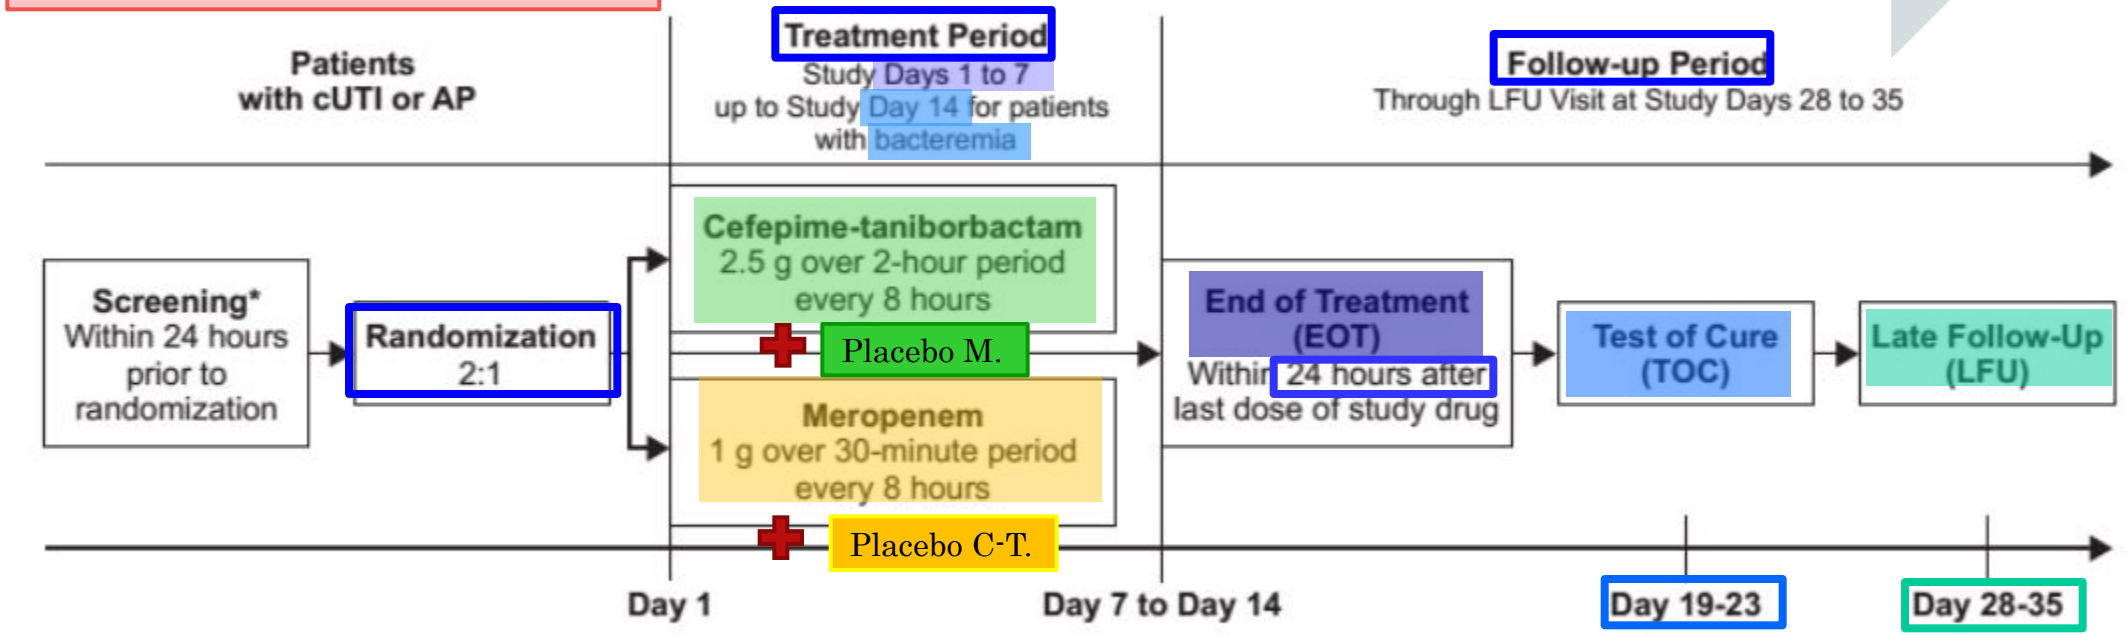
Tipo infección
- ITU.
- PA.

Región
- Norte-América.
- Europa occidental.
- Europa del Este.
- Resto mundo.

Desescalar AB oral.

Aleatorización previa resultado urinocultivo.

Figure S1. Overview of Study Design



AP = acute pyelonephritis; cUTI = complicated urinary tract infection; EOT = end of treatment; TOC = test of cure; LFU = late follow-up.
*Samples taken for determination of eligibility in primary analysis population (microbiologic intent-to-treat [microITT]).

MATERIAL Y MÉTODOS

POBLACIÓN DEL ENSAYO

Población por intención de tratar (ITT)

- Todos los pacientes aleatorizados.

Población microbiológica por intención de tratar (micro-ITT)

- Pacientes UC positivo (100.000 UFC/ml) para Gram – ⇨ S a Cefep-tanibor y Meropenem.
- Aislamiento no superior a 2 bacterias.
- Monomicrobiano G + ⇨ excluidos.

Población microbiológica extendida por intención de tratar (extended micro-ITT)

- Toda población micro-ITT + pacientes con UC positivo para Gram - S a sólo un F (C-T o M).

POBLACIÓN micro-ITT:

✓ Utilizada en los ensayos con ANTIBIÓTICOS para evaluar la **NO INFERIORIDAD** y que el componente MICROBIOLÓGICO del objetivo primario pueda ser evaluado.

MATERIAL Y MÉTODOS

POBLACIÓN DEL ENSAYO

END POINT PRIMARIO

Compuesto de: respuesta clínica y microbiológica (micro-ITT) en "periodo de curación" desde los días 19 a 23.

MEJORIA CLÍNICA:

-Resolución de síntomas y signos sin necesidad de otros AB adicionales.

MEJORIA MICROBIOLÓGICA:

- ↓Patógenos basales ≤ 1000 UFC/ml.

END POINT SECUNDARIOS

Compuesto de: mejoria clínica y microbiológica (micro-ITT y micro-ITT extendida) al final del tratamiento y seguimiento tardío.

FINAL TRATAMIENTO:

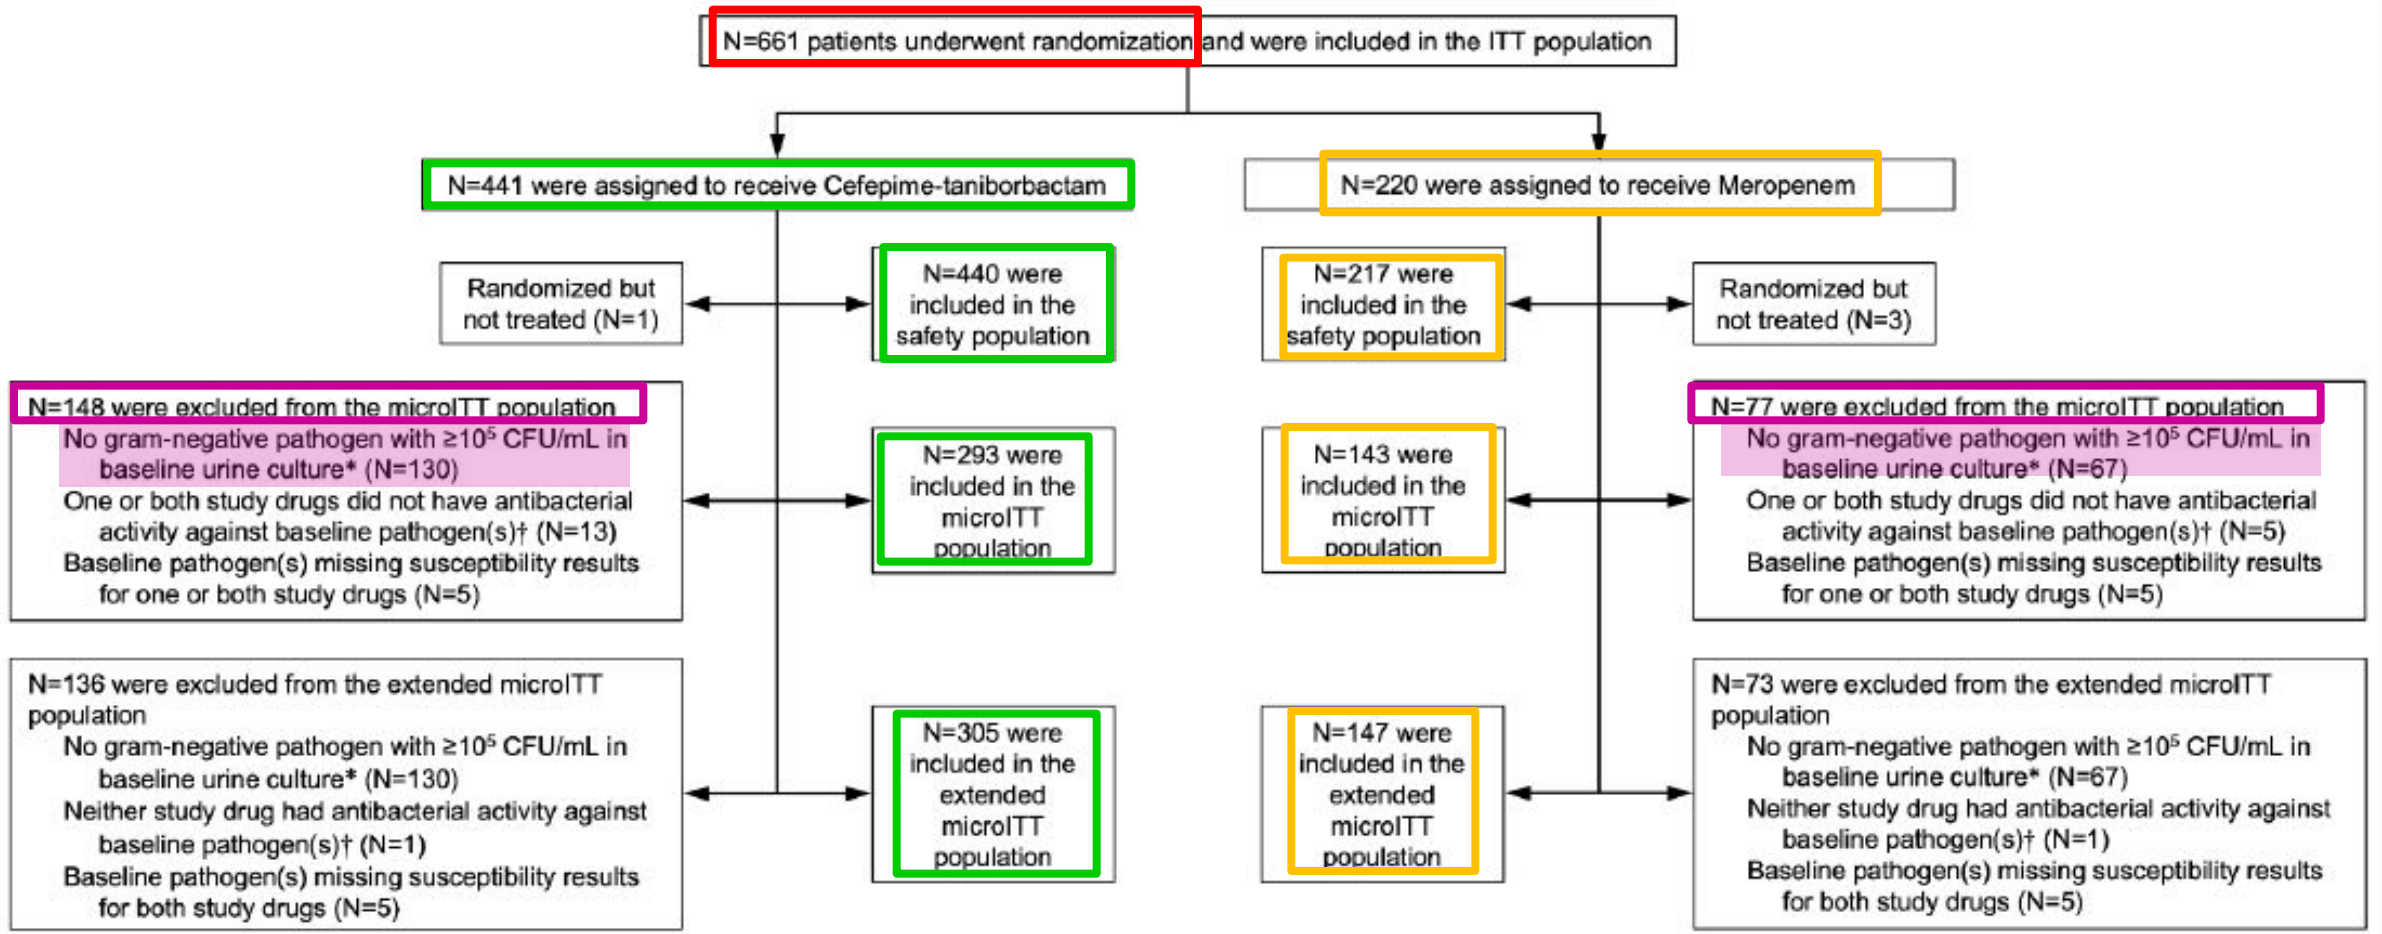
-Primeras 24 horas tras última dosis AB.

SEGUIMIENTO TARDIO:

-Días 28 a 35.

RESULTADOS

Figure S2. Patient Disposition – CONSORT Diagram



RESULTADOS

- ✓ La **mayoría finalizó tratamiento AB** ⇨ 93.9% vs 96.4%.
- ✓ La **mayoría completó ensayo** ⇨ 96.6% vs 97.3%.
- ✓ Duración media de tratamiento ⇨ **7 días** (1 a 15).
- ✓ Mediana duración tto en **bacteriemia** fue similar (**12-14 días**).

Table S5. Gram-negative Baseline Pathogens in at least 10 Patients across Both Treatment Groups (Microbiologic Intent-to-Treat Population)

	Cefepime-taniborbactam (N=293) n (%)	Meropenem (N=143) n (%)	Total (N=436) n (%)
Enterobacterales	281 (95.9%)	137 (95.8%)	418 (95.9%)
Enterobacter cloacae complex	14 (4.8%)	3 (2.1%)	17 (3.9%)
Escherichia coli	202 (68.9%)	99 (69.2%)	301 (69.0%)
Klebsiella pneumoniae	40 (13.7%)	20 (14.0%)	60 (13.8%)
Proteus mirabilis	10 (3.4%)	10 (7.0%)	20 (4.6%)
Pseudomonas aeruginosa	12 (4.1%)	6 (4.2%)	18 (4.1%)

The denominator for percentages is the number of patients in each treatment group (N).
Patients may have more than one pathogen at baseline.
Multiple isolates of the same pathogen (i.e., species) from the same patient are counted only once.

Table 1. Characteristics of the Patients at Baseline (Microbiologic Intention-to-Treat Population).*

Characteristic	Cefepime–Taniborbactam (N=293)	Meropenem (N=143)
Age		
Mean	56.5±17.6	55.8±17.9
Distribution — no. (%)		
<65 yr	180 (61.4)	90 (62.9)
65 to 75 yr	72 (24.6)	35 (24.5)
>75 yr	41 (14.0)	18 (12.6)
Female sex — no. (%)	161 (54.9)	69 (48.3)
Race or ethnic group — no. (%)†

RESULTADOS

BACTERIEMIAS

- ✓ HEMOCULTIVOS de control :
  - Fueron negativos en todos los pacientes con bacteriemia inicial en grupo Cefepime/Taniborbactam.

- ✓ OBJETIVO PRIMARIO (compuesto respuesta clínica y microbiológica en "periodo de curación")
  - Fue **81.6% Cefepime/Taniborbactam** vs 68.4% Meropenem.

POBLACIÓN MICRO-ITT EXTENDED

- ✓ CEFEPIME-TANIBORBACTAM se cumplió el objetivo primario.
  - 8 de 10 pacientes **RESISTENTES al MEROPENEM**
    - *K. pneumoniae*: 6 pacientes de 7.
    - *P. aeroginosa*: 1 paciente de 2.
    - *Serratia marcescens*: 1 paciente.

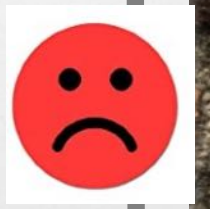
DISCUSIÓN

FORTALEZAS

- ✓ Mayores tasas de **respuesta compuesta** (C+M) y **mantenida en el seguimiento.**
  - Teniendo en cuenta patógenos eran S a ambos F.
  - Criterio mixto y características del microbiológicos más estrictos que usados en ensayos previos de AB aprobados.
- ✓ Resultados **concordantes** en los **diferentes subgrupos**, incluidos: enfermedad grave (bacteriemia y SIRS), según patógeno inicial y en grupos resistentes.
- ✓ Efectos adversos **similares:**
  - A pesar de dosis máximas de Cefepime: 2 gr/8 h.
- ✓ Caracteríticas basales y microbiológicas **similares** en ambos grupos.
  - **SUPERIORIDAD no** explicada por diferencias.
- ✓ **NO** desescalaje a **ANTIBIOTERAPIA ORAL** evita posible factor de confusión de AB adicional.
- ✓ Duración tratamiento ⇨ **7 días** (sin bacteriemia).
  - Consistente con guias actuales "duración corta" tto.
- ✓ **Generalización resultados:**
  - Representativos por incluir patógenos **multiR** (incluida P. aeroginosa).

LIMITACIONES



- ❑ Interrupción tratamiento por **ef. adversos graves** fue **superior**: 3% (C-T) vs 0.9% (M).
  - Heterogéneos….
  - < 5%.
- ❑ **NO** reflejo práctica clínica a nivel mundial:
  - Ausencia **tto oral**, **duración** fija **iv** y necesidad **hospitalización**.
- ❑ **81.9%** pacientes ⇨ **EUROPA del ESTE.**
  - Diferencias regionales en patrones de S.
  - Ubicación geográfica **no alteró**: caract. fisiopatológicas ITUc ni respuesta esperada a AB porque la **población incluida** eran bacterias **S a ambos fármacos.**
- ❑ Resultados de objetivo primario compuesto:
  - Fue más estricto que utilizados en ensayos previos.
  - Incluye pacientes con **bacteriuria asintomática** como un **fallo compuesto**, requeriría análisis complementario de respuesta clínica solamente.

CONCLUSIONES

1

- ✓ En pacientes con **infecciones urinarias complicadas** **CEFEPIME/TANIBORBACTAM** fue **SUPERIOR** a **MEROPENEM** en alcanzar tanto **respuesta CLÍNICA** como **MICROBIOLÓGICA** de **curación.**

2

- ✓ **Respuesta compuesta** y **respuesta clínica** fue **superior en grupo CEFEPIME/TANIBORBACTAM** al **FINAL del SEGUIMIENTO**.

3

- ✓ Ambos fármacos tienen un **perfil de SEGURIDAD SIMILAR.**

4

- ✓ **CEFEPIME/TANIBORBACTAM** es una **opción terapéutica** en pacientes con **ITUc y PIELONEFTRITIS AGUDA** causada por ***Enterobacteriae sp*** y ***P. aeroginosa*** incluidas cepas **resistentes**.

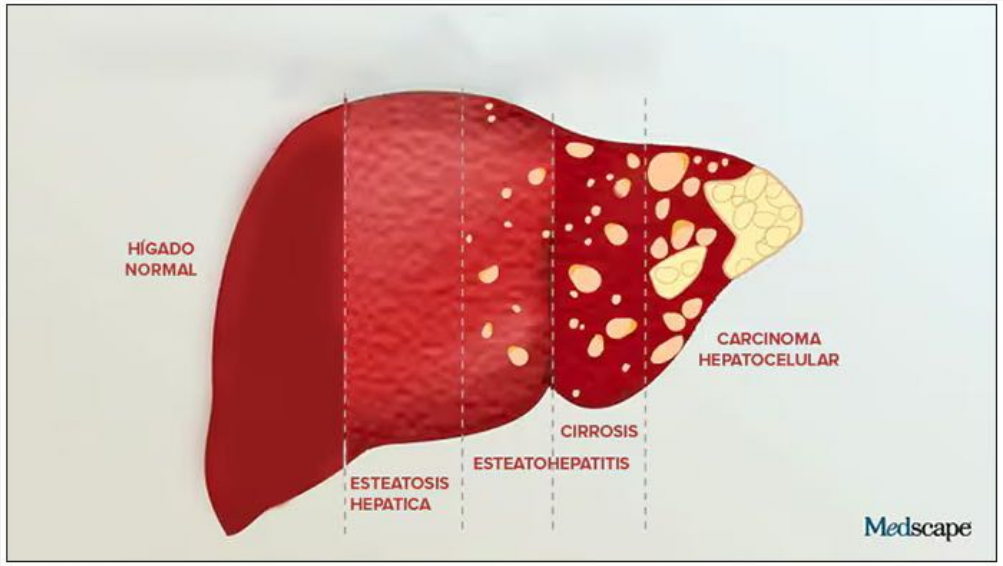
The NEW ENGLAND JOURNAL of MEDICINE

ESTABLISHED IN 1812 FEBRUARY 8, 2024 VOL. 390 NO. 6

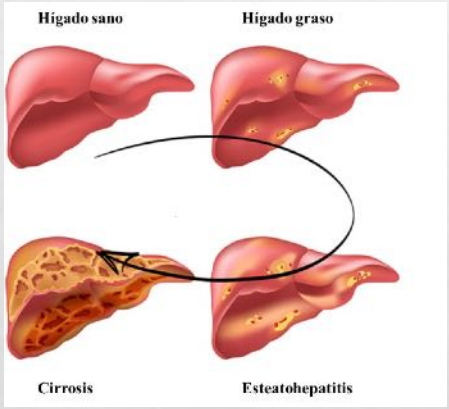
A Phase 3, Randomized, Controlled Trial of Resmetirom in NASH with Liver Fibrosis

S.A. Harrison, P. Bedossa, C.D. Guy, J.M. Schattenberg, R. Loomba, R. Taub, D. Labriola, S.E. Moussa, G.W. Neff, M.E. Rinella, Q.M. Anstee, M.F. Abdelmalek, Z. Younossi, S.J. Baum, S. Francque, M.R. Charlton, P.N. Newsome, N. Lanthier, I. Schiefke, A. Mangia, J.M. Pericàs, R. Patil, A.J. Sanyal, M. Noureddin, M.B. Bansal, N. Alkhouri, L. Castera, M. Rudraraju, and V. Ratziu, for the MAESTRO-NASH Investigators*

INTRODUCCIÓN



✓ESTEATOHEPATITIS NO ALCOHÓLICA (NASH)



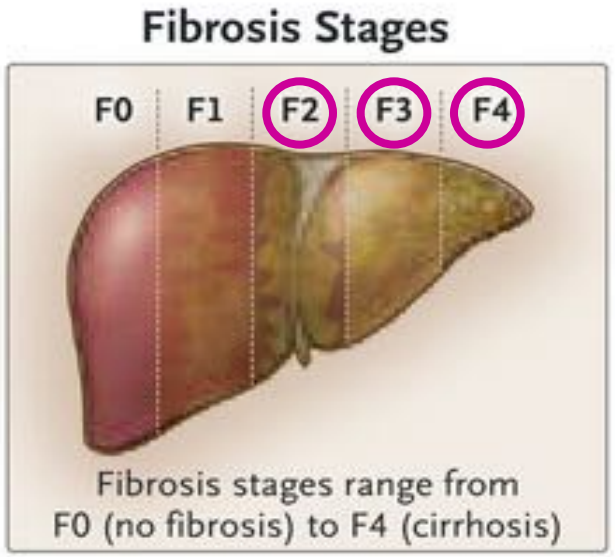
✓ Esteatosis hepática ≥ 5%.

✓ Daño hepatocelular.

✓ Inflamación.

INTRODUCCIÓN

✓ **NASH**: Esteatohepatitis no alcohólica.



Angulo et al. "Liver fibrosis, but no other histologic features, associates with ong term outcomes of patients with nonalcoholic fatty liver disease". **Gastroenterology 2015; 149(2):389-97.e10.**

Huang DQ et al. "Fibrosis progression rate in biopsy-proven nonalcoholic fatty liver disease among people with diabetes versus people without diabetes: a multicenter study" **Gastroenterology 2023;165(2):463-472 e5.**

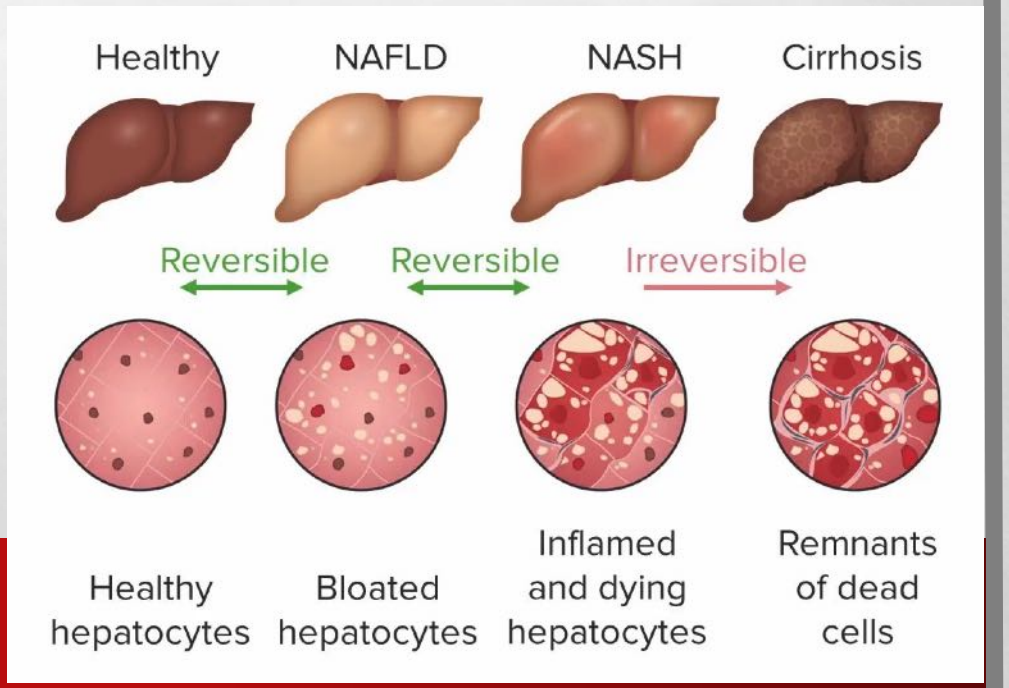
Targher G et al. "Nonalcoholic fatty liver disease: amultisystem disease requiring a multidisciplinary and holistic approach" **Lancet Gastroenterol Hepatol 2021;6:578-88.**

✓ Aumenta significativamente el riesgo de complicaciones hepáticas, especialmente en **DM 2** y **obesidad** (70%).

✓ **NAFLD**: hígado graso no alohólico

- Estudio prospectivo indicó que sólo F3 y F4 se asociaban con muerte por enfermedad hepática.

Sanyal AJ et al. "Prospective study of outcomes in adults wih nonalcoholic fatty liver disease". **NEJM 2021;385:1559-69.**



INTRODUCCIÓN

- ✓ Prevalencia mundial NASH ⇨ 4- 6%.
  - ❖ Elevados costes sociosanitarios.

- ✓ Opciones tratamiento NASH.
  - ❖ **Tto OBESIDAD** ⇨ dieta y ejercicio y/o aGLP-1.
  - ❖ **Tto DM 2** ⇨ glitazonas.

Schattenberg JM et al. "Disease burden and economic impact of diagnosed non alcoholic steatohepatitis in five European countries in 2018: a cost of illness analysis". **Liver Int 2021;41:1227-42.**

Younossi ZM et al. "The economic and economic and clinical burden of nonalcoholic fatty liver disease in the United States and Europe". **Hepatology 2016; 64:1577-86.**

- ✓ En la actualidad **NO** hay **NINGÚN FÁRMACO APROBADO** para el **TRATAMIENTO.**

- ✓ Necesidad imperiosa terapéutica ⇨**FDA** aprobaría un F condicionado a:
  - ❖ Criterios histológicos: mejoría estadio fibrosis.
  - ❖ Beneficio clínico traducido como:
    - ❑ ↓ mortalidad por cualquier causa.
    - ❑ ↓ necesidad transplante hepático.
    - ❑ ↓ descompensación hidrópica.

Omokaro SO et al. "FDA regulatory considerations for NASH clinical trial endpoints". Silver Spring, MD: **Food and Drug Administration; February 26, 2018.**

Omokaro SO et al. "FDA regulatory considerations for NASH clinical trial endpoints". Silver Spring, MD: **Food and Drug Administration; February 26, 2018.**

INTRODUCCIÓN

- ✓ **TSH modula:**
  - ❖ Glucosa hepática.
  - ❖ Metabolismo lipídico.

→

- ✓ **Hipotiroidismo** se asocia a **esteatosis hepática**.

- ✓ **TRH**
  - ✓ **TRH-α**
  - ✓ **TRH-β**

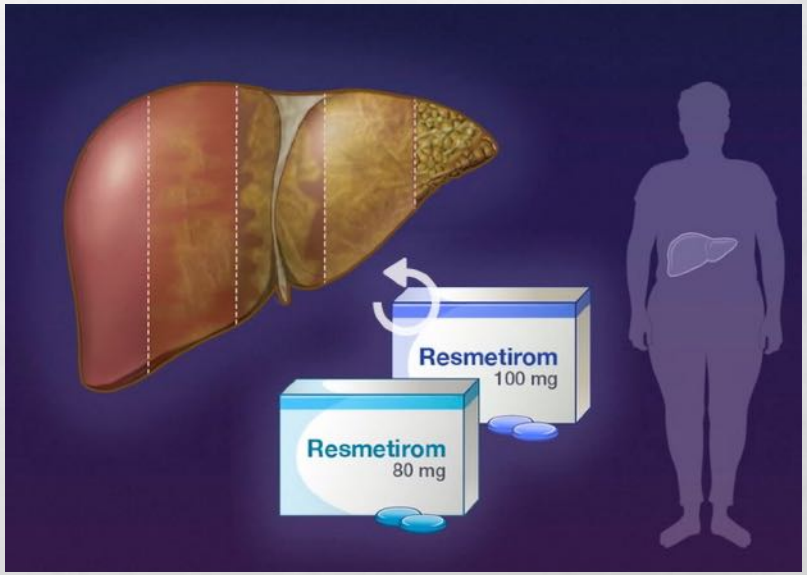
Resmetirom for nonalcoholic fatty liver disease: a randomized, double-blind, placebo-controlled phase 3 trial

Nature Medicine | Volume 29 | November 2023 | 2919–2928

- ✓ MAESTRO-NASH
  - Ensayo en fase 3 de eficacia y seguridad de RESMETIROM en adultos con NASH confirmada por biopsia con resultados a 52 semanas.



MÉTODOS

DISEÑO

- ✓ Ensayo clínico en fase 3, aleatorizado, doble ciego y controlado con placebo.
- ✓ 15 países, 245 centros.
- ✓ Duración del ensayo: 54 meses.
  - ❖ Evaluación inicial a los **52 semanas**.

Madrigal Pharmaceuticals

MÉTODOS

CRITERIOS DE SELECCIÓN

CRITERIOS DE INCLUSIÓN

✓3 de 5 criterios síndrome metabolico (IFD)

✓Fibroscan realizado en los 3 meses previos.
- CAP ≥ 280dB
- Rigidez ≥ 8.5 kPa

o

✓Biopsia hepática realizada en los 6 meses previos.

✓Bioposia hepática: AP compatible NASH
- Score NAFLD ≥ 4 puntos.
- Grados fibrosis
  - ≥ 50% F3.
  - ≤ 15% F1
    - F1B: principalmente
    - F1A o F1C ≤ 3%.

✓Peso estable últimos 3 meses (variaciones <5%)

✓Dosis aGLP1 sin cambios últimos 6 meses.

Table 5 International Diabetes Federation metabolic syndrome world-wide definition

Central obesity	Waist circumference*†—ethnicity specific (see Table 7) plus any two of the following:
Raised triglycerides	≥ 1.7 mmol/l (150 mg/dl) or specific treatment for this lipid abnormality
Reduced HDL-cholesterol	< 1.03 mmol/l (40 mg/dl) in males < 1.29 mmol/l (50 mg/dl) in females or specific treatment for this lipid abnormality
Raised blood pressure	Systolic: ≥ 130 mmHg or Diastolic: ≥ 85 mmHg or treatment of previously diagnosed hypertension
Raised fasting plasma glucose‡	Fasting plasma glucose ≥ 5.6 mmol/l (100 mg/dl) or previously diagnosed Type 2 diabetes If > 5.6 mmol/l or 100 mg/dl, oral glucose tolerance test is strongly recommended but is not necessary to define presence of the syndrome

MÉTODOS

CRITERIOS DE SELECCIÓN

CRITERIOS DE INCLUSIÓN

✓3 de 5 criterios **síndrome metabolico** (IFD)

✓**Fibroscan** realizado en los **3 meses previos.**

- CAP ≥ 280dB
- Rigidez ≥ 8.5 kPa

o

✓**Biopsia hepática** realizada en los **6 meses previos.**

✓Bioposia hepática: AP compatible **NASH**

- **Score NAFLD** ≥ 4 puntos.
- **Grados fibrosis**
  - ≥ 50% **F3.**
  - ≤ 15% F1
    - F1B: principalmente
    - F1A o F1C ≤ 3%.

✓**Peso estable** últimos 3 meses (variaciones <5%)

✓Dosis **aGLP1** sin cambios últimos 6 meses.

Tabla 1. Clasificación histológica de actividad de hígado graso no alcohólico (adaptado de Kleiner et al. 2005)[5]

NAFLD *Activity Score* (NAS) (0-8)	Suma de los puntajes de esteatosis, inflamación lobular y balonización hepatocelular
Esteatosis (0-3)	0 = < 5% hepatocitos comprometidos 1 = 5-33% hepatocitos comprometidos 2 = 33-66% hepatocitos comprometidos 3 = > 66% hepatocitos comprometidos
Inflamación lobular (0-3)	0 = ninguna 1 = < 2 focos por campo óptico x200 2 = 2-4 focos por campo óptico x200 3 = > 4 focos por campo óptico x200
Balonización de hepatocitos (0-2)	0 = ninguno 1 = pocas células balonizadas 2 = muchas células/balonización prominente
Correlación entre el total de puntaje NAS y el diagnóstico global histológico de esteatohepatitis	
NAFLD *activity score*	Diagnóstico histológico de esteatohepatitis
≥ 5	EHNA probable o definitivo
3-4	Indeterminado
≤ 2	No EHNA
Puntuación de fibrosis	1 Perisinusoidal o periportal 1A Leve fibrosis perisinusoidal en zona 3 1B Moderada fibrosis perisinusiodal en la zona 3 1C Sólo fibrosis portal/periportal 2 Fibrosis perisinusoidal en la zona 3, con fibrosis portal/periportal 3 Puentes de fibrosis 4 Cirrosis

MÉTODOS

CRITERIOS DE SELECCIÓN

CRITERIOS DE EXCLUSIÓN

- Consumo de alcohol:
  - Mujeres > 20 gr/día.
  - Hombres > 30 gr/día.
- HbA1C > 9%.
- Otras causas de hepatopatía crónica sin cirrosis diferentes NASH .

MÉTODOS

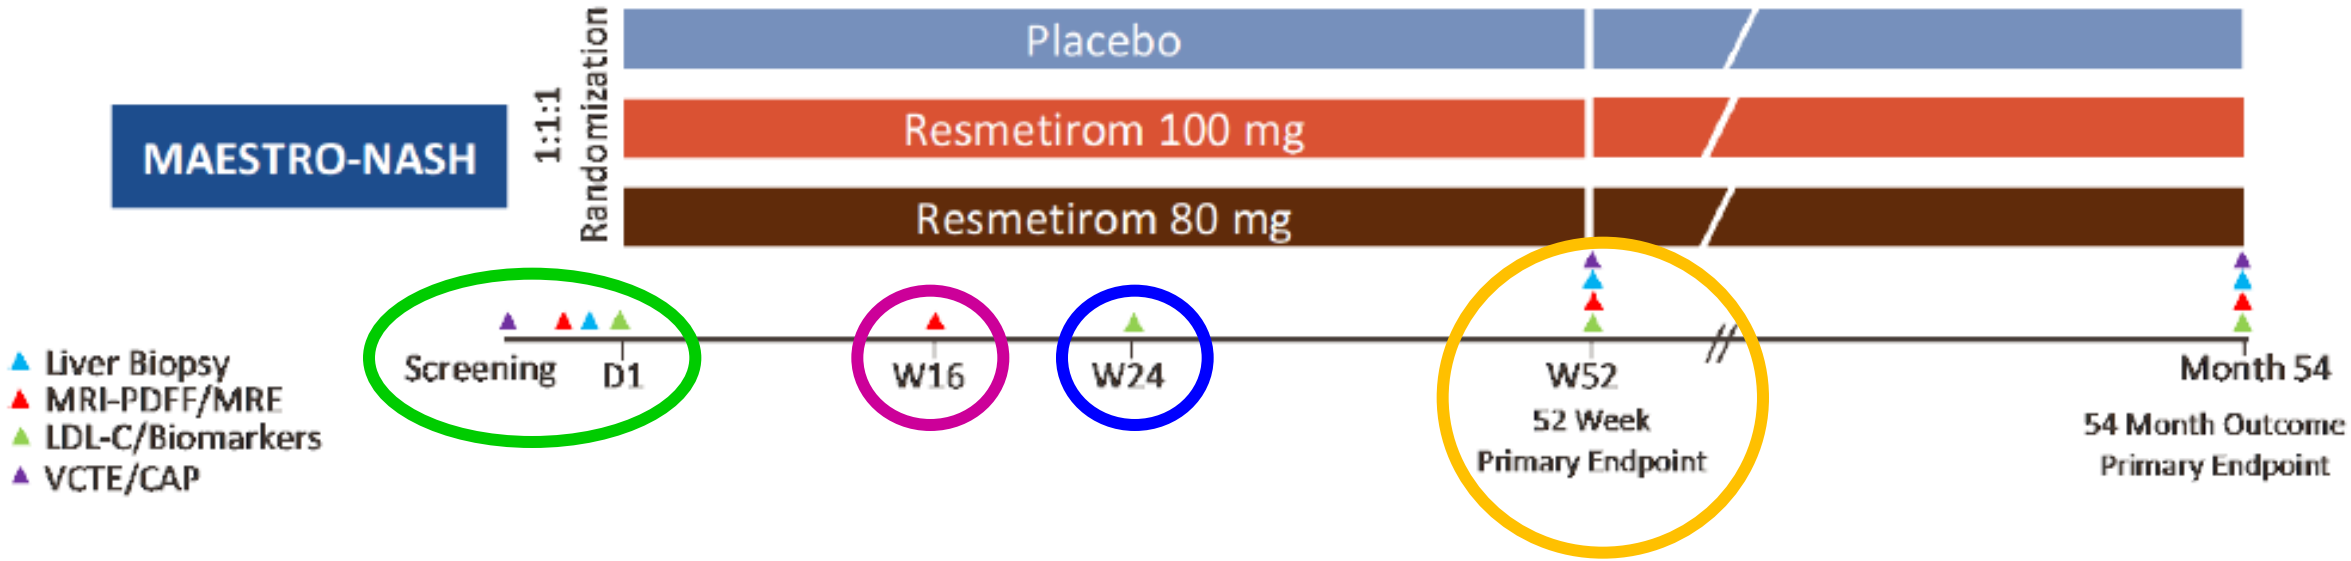
ALEATORIZACIÓN

- ✓ 1:1:1.
  - ❖ DM 2 (presencia o ausencia).
  - ❖ Estadío de fibrosis: F1, F2, F3.

Supplementary Figures and Tables

Figure S1. Study Design

CAP, controlled attenuation parameter; LDL-C, low-density lipoprotein cholesterol; MRE, magnetic resonance elastography; MRI-PDFF, magnetic resonance imaging-proton density fat fraction; VCTE, vibration-controlled transient elastography.



MÉTODOS

OBJETIVOS

OBJETIVO PRIMARIO

Resolución NASH:

- Balonización hepatocitos: 0.
- Inflamación lobulillar: 0-1.
- Reducción score NAFLD ≥ 2 puntos.

Reducción fibrosis en al menos 1 estadio sin empeoramiento score **NAFLD.**

OBJETIVO SECUNDARIO

Reducción niveles **LDLc** en la semana 24.

OBJETIVOS DE SEGURIDAD

Eventos adversos (Graves):

- Muerte.
- Eventos CV.
- Toxicidad hepática.

Criterios clínicos.

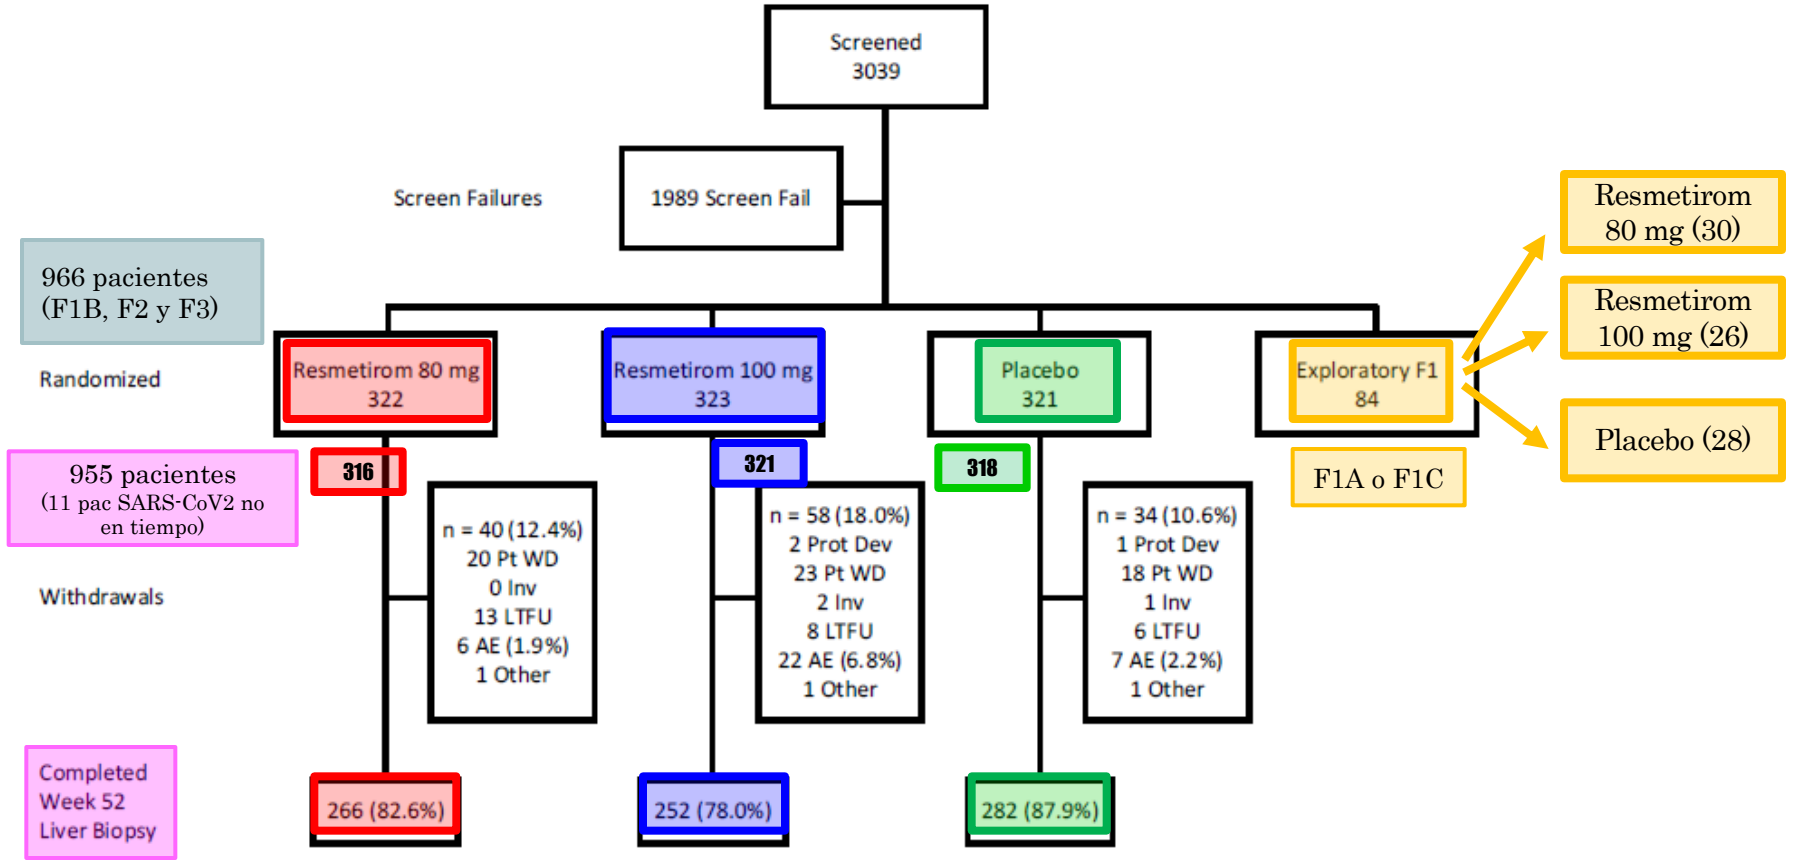
Criterios BQ.

RESULTADOS

- ✓ Marzo 2019 a julio 2021.
- ✓ 1050 pacientes.

Figure S3. Patient Disposition

AE, adverse event; LTFU, lost to follow up. The primary reasons for screen failure included biopsy, withdraw of consent, MRI-PDFF <8%, HbA1c >9. The exploratory F1 group included baseline F1a/F1c patients (n = 84) that were considered only for exploratory efficacy and safety analyses. These patients received treatment but as prespecified in the statistical analysis plan, were not included in the primary analysis population.



RESULTADOS

- ✓ **Semana 52 de evaluación** objetivos:
  - 92% cumplimiento.
  - 80% adherencia.

Table 1. Demographic and Clinical Characteristics of the Patients at Baseline (Primary Population).*

Characteristic	Resmetirom, 80 mg (N=322)	Resmetirom, 100 mg (N=323)	Placebo (N=321)

END POINT PRIMARIO

Table 2. Biopsy End Points.*

End Point	Resmetirom, 80 mg (N=316)	Resmetirom, 100 mg (N=321)	Placebo (N=318)	Difference between Resmetirom, 80 mg, and Placebo (95% CI)†	P Value	Difference between Resmetirom, 100 mg, and Placebo (95% CI)†	P Value
	percent with response			*percentage points*		*percentage points*	
Primary end points							
NASH resolution with no worsening of fibrosis	25.9	29.9	9.7	16.4 (11.0–21.8)	<0.001	20.7 (15.3–26.2)	<0.001
Fibrosis improvement by ≥1 stage with no worsening of NAFLD activity score	24.2	25.9	14.2	10.2 (4.8–15.7)	<0.001	11.8 (6.4–17.2)	<0.001
Other end points							
≥2-Point improvement in NAFLD activity score, including ≥1-point improvement in hepatocellular ballooning or lobular inflammation, with no worsening of fibrosis	41.3	44.9	21.2	20.2 (13.8–26.5)		23.8 (17.4–30.2)	
≥2-Point improvement in NAFLD activity score, including ≥1-point improvement in hepatocellular ballooning or lobular inflammation, with improvement in fibrosis	18.8	21.2	8.5	10.5 (5.8–15.3)		13.0 (8.3–17.7)	
Improvement in each component of NAFLD activity score	23.3	27.9	7.2	16.1 (11.1–21.0)		20.9 (15.8–25.9)	
Improvement in fibrosis by ≥2 stages	8.3	10.1	2.8	5.6 (2.5–8.7)		7.4 (3.9–10.8)	
Both NASH resolution and fibrosis improvement by ≥1 stage	14.2	16.0	4.9	9.5 (5.4–13.6)		11.6 (7.5–15.8)	

* Of the 966 patients in the primary population, 11 patients (6 in the 80-mg resmetirom group, 3 in the 100-mg resmetirom group, and 2 in the placebo group) had a delay in their week 52 biopsy for reasons related to coronavirus disease 2019 (Covid-19) and were not evaluated for the end points shown here. NASH resolution was defined as a hepatocellular ballooning score of 0, a lobular inflammation score of 0 or 1, and a reduction in the NAFLD activity score by at least 2 points.

† The widths of the confidence intervals have not been adjusted for multiplicity and may not be used for hypothesis testing.

Adverse event leading to trial discontinuation before wk 52†	6 (1.9)	22 (6.8)	7 (2.2)
Adverse event leading to trial discontinuation during entire treatment period†	9 (2.8)	25 (7.7)	11 (3.4)
Fatal adverse event	1 (0.3)	2 (0.6)	1 (0.3)
Major adverse cardiovascular event‡	1 (0.3)	1 (0.3)	1 (0.3)
Other cardiovascular event‡	0	1 (0.3)	3 (0.9)
Adverse events affecting >10% of patients in any group			
Diarrhea	87 (27.0)	108 (33.4)	50 (15.6)
Covid-19	69 (21.4)	54 (16.7)	66 (20.6)
Nausea	71 (22.0)	61 (18.9)	40 (12.5)
Arthralgia	48 (14.9)	35 (10.8)	40 (12.5)
Back pain	35 (10.9)	27 (8.4)	38 (11.8)
Urinary tract infection	33 (10.2)	27 (8.4)	27 (8.4)
Fatigue	33 (10.2)	26 (8.0)	28 (8.7)
Pruritus	26 (8.1)	37 (11.5)	22 (6.9)
Vomiting	28 (8.7)	35 (10.8)	17 (5.3)

* Shown are events that were considered by investigators to be related to resmetirom or placebo.
† Data are for events that emerged after the first dose of resmetirom or placebo and within 30 days after the last dose.
‡ Major adverse cardiovascular events were defined as nonfatal stroke, nonfatal myocardial infarction, and death from cardiovascular causes. All cardiovascular events were adjudicated.

DISCUSIÓN

FORTALEZAS

- ✓ **Resmetirom** superior a placebo en resultados histológicos y mejoría fibrosis.
  - Cumplen estándares FDA.
  - Resultados consistentes en subgrupos.
- ✓ Mejoria en parámetros pruebas no invasivas (imagen como séricos) lo respalda.
- ✓ Mejoria todo el perfil lipídico
  - **Reducción RCV** ?? ⇨ ↓↓ Apo B y LDLc
- ✓ Interrupción mayor ⇨ Resmetirom 100 mg.
  - Ef. adversos graves **similares** en todos los grupos.
  - Ef. adversos más comunes: **GI** (autolimitado).
- ✓ Paradigma ⇨ p. no invasivas **dco** NASH y monitorizar **respuesta tto.**
  - ↓ 30% grasa hepática (MRI-PDFF) y/o ↑120% globulina fijadora hh sexuales ⇨ se asocia a respuesta anatomo-patológica.

LIMITACIONES

- ❑ Falta de correlación entre datos clínicos y datos anatomo-patológicos.
- ❑ **No** evaluada **seguridad a largo plazo.**
  - Previsto ensayo a 54 meses.

CONCLUSIONES

✓**RESMETIROM** puede proprocionar <u>beneficios</u> a pacientes con **<u>ESTEATOHEPATITIS NO ALCOHÓLICA</u>** (NASH) y datos de **<u>FIBROSIS HEPÁTICA</u>**.

✓Tanto dosis de <u>80 mg</u> como dosis de <u>100 mg</u> fueron <u>eficaces</u> para ambos <u>objetivos primarios</u> (mejorar score actividad NAFLD y reducir fibrosis en 1 estadio).

RESMETIROM

EDITORIALS

Selective Agonists of Thyroid Hormone Receptor Beta for the Treatment of NASH

Kenneth Cusi, M.D.

N ENGL J MED 390;6 NEJM.ORG FEBRUARY 8, 2024

- ✓ Superior a placebo en ambos objetivos primarios.
- ✓ Mejoro DL aterogénica.
- ✓ Efecto neutro en peso, resistencia a insulina, cifras de glucemia, FC y PA.
- ✓ Perfil aceptable ef. adversos: náuses, vómitos y diarrea.

- ✓ **↑ niveles globulina fijadora de hh sexuales ⇨ ↑ estradiol y testosterona totales.**
  - ❖ No parece afectar a niveles testosterona libres.
  - ❖ No datos niveles libres.

- ✓ Necesario **seguimiento clínico** y **medición precisa** niveles hh libres.

RESMETIROM

EDITORIALS

Selective Agonists of Thyroid Hormone Receptor Beta for the Treatment of NASH

Kenneth Cusi, M.D.

N ENGL J MED 390;6 NEJM.ORG FEBRUARY 8, 2024

- ✓ Afectación **eje hipofisario-tiroides**
  - ↓ T4 (17-21%).
  - ↓ TSH media.
  - Niveles T3 se mantuvieron normales.

- ✓ **PROMOVER HIPOTIROIDISMO** de difícil diagnóstico.

- ✓ Necesario **seguimiento clínico** y **medición precisa** niveles hh libres.

Table 2. Biopsy End Points.*

End Point	Resmetirom, 80 mg (N=316)	Resmetirom, 100 mg (N=321)	Placebo (N=318)	Difference between Resmetirom, 80 mg, and Placebo (95% CI)†	P Value	Difference between Resmetirom, 100 mg, and Placebo (95% CI)†	P Value
	percent with response			*percentage points*		*percentage points*	
Primary end points							
NASH resolution with no worsening of fibrosis	25.9	29.9	9.7	16.4 (11.0–21.8)	<0.001	20.7 (15.3–26.2)	<0.001
Fibrosis improvement by ≥1 stage with no worsening of NAFLD activity score	24.2	25.9	14.2	10.2 (4.8–15.7)	<0.001	11.8 (6.4–17.2)	<0.001
Other end points							
≥2-Point improvement in NAFLD activity score, including ≥1-point improvement in hepatocellular ballooning or lobular inflammation, with no worsening of fibrosis	41.3	44.9	21.2	20.2 (13.8–26.5)		23.8 (17.4–30.2)	
≥2-Point improvement in NAFLD activity score, including ≥1-point improvement in hepatocellular ballooning or lobular inflammation, with improvement in fibrosis	18.8	21.2	8.5	10.5 (5.8–15.3)		13.0 (8.3–17.7)	
Improvement in each component of NAFLD activity score	23.3	27.9	7.2	16.1 (11.1–21.0)		20.9 (15.8–25.9)	
Improvement in fibrosis by ≥2 stages	8.3	10.1	2.8	5.6 (2.5–8.7)		7.4 (3.9–10.8)	
Both NASH resolution and fibrosis improvement by ≥1 stage	14.2	16.0	4.9	9.5 (5.4–13.6)		11.6 (7.5–15.8)	

* Of the 966 patients in the primary population, 11 patients (6 in the 80-mg resmetirom group, 3 in the 100-mg resmetirom group, and 2 in the placebo group) had a delay in their week 52 biopsy for reasons related to coronavirus disease 2019 (Covid-19) and were not evaluated for the end points shown here. NASH resolution was defined as a hepatocellular ballooning score of 0, a lobular inflammation score of 0 or 1, and a reduction in the NAFLD activity score by at least 2 points.

† The widths of the confidence intervals have not been adjusted for multiplicity and may not be used for hypothesis testing.

- ✓ 2 de cada 10 pacientes tratados.
- ✓ 1 de cada 10 pacientes tratados.

- ✓ NECESARIO TTO COMBINADO:
  - aGLP1.
  - Pioglitazona.

MODELOS ANIMALES

- FC.
- ↓ FE.
- Fibrosis miocárdica.
- Disfunción endotelial.

MÉTODOS

DISEÑO DEL ESTUDIO

- ✓ Determinar si **MNP** son **detectables en la placa ateroesclerótica** y si la **carga** de MNP se **asocia a ECV.**
  - ❖ Mediante cromatografia de gases acoplado a espectrometria de masas, análisis de isótopos estables y microscopia electrónica en a. carótida (endarterectomia).
- ✓ Estudio observacional, prospectivo y multicéntrico.
- ✓ 1 agosto 2019 a 31 julio 2020.

DISCUSIÓN

FORTALEZAS

- ✓ Estudios preclínicos previos se evaluaban **MNP de tamaños superiores.**
  - Difícil extrapolar hallazgos a humanos.

  - Según OMS: MNP > 150 µm y 10 µm de diámetro no se absorben en sangre no penetran en los tejidos.

LIMITACIONES

- ❑ Sólo detectados en la placa: **polietileno** y **cloruro de polivinilo** (2 de 11).
  - Más estudios: preferencia ateroesclerosis y/o patogenicidad.
- ❑ Resultados **no** demuestran **CAUSALIDAD**
  - Variables de confusión no estudiadas (tipo/cantidad exposión, estilo de vida...)
- ❑ No mediciones **polución ambiental**: FRCV.
  - PM 2,5 y PM10.
- ❑ Posible riesgo residual de contaminación del laboratorio.
  - Recogida y análisis de las muestras escrupulosos.
- ❑ **No** valoración **nivel socio-económico.**
- ❑ **Población "seleccionada"** datos no extrapolables.
- ❑ No estudiadas variables de alimentación-agua consumida.
- ❑ **"Papel light"** en **enfermedad cardiovascular** ???
  - ↑ exposición a plásticos en décadas y ↓ tasa ECV .

Cosmética

La UE impondrá tasas a las empresas de cosmética para reducir los microplásticos
